KEY WORDS

Research methodology, Qualitative research, evidence based practice (EBP).

ABSTRACT

Objective

This article provides a breakdown of the components of qualitative research methodology. Its intention is to simplify the terminology and process of qualitative research to enable novice readers of research to better understand the concepts involved (Benner 1984).

Primary Argument

Current Competency Standards for Australian Registered Nurses and Midwives include a requirement to evaluate and implement research as part of their care (Borbasi and Jackson 2012, p.22; Nursing and Midwifery Board of Australia 2012). They are also expected to be actively involved in research studies (Borbasi and Jackson 2012, p.22). Evidence, when available, can enhance clinical judgement (Hamer and Collinson 2014, p.9). As evidence and research are threaded through professional work and study in the health sciences (Wright-St Clair et al 2014, p.5) nurses, particularly novice nurses, may benefit from a discussion that helps them understand the sequence of a research paper (Moxham 2012) using qualitative methodology.

Conclusion

A systematic and logical approach will be used to discuss the content of a typical qualitative research paper. A comparative grid at the end of this paper (appendix 1) comparing the qualitative research designs, may lead the nurse to better understand the differing components of several qualitative research methods (Ingham-Broomfield 2014).
